SUMMARY

Cloud Engineer with hands-on experience in AWS infrastructure, deployment automation, containerized applications, and CloudWatch monitoring, supported by projects in multi-tier deployment and serverless applications. AWS Certified Solutions Architect – Associate, with a backend development foundation in REST APIs, authentication, and database integration. Interested in teamwork and continuous cloud innovation. Based in Lagos, Nigeria; open to international relocation with employer sponsorship and to remote roles that can hire from Nigeria.

SKILLS

Technical Skills – AWS (IAM, VPC, EC2, S3, RDS, Lambda, CloudFront, Route 53, CloudWatch, ECS, EKS, Fargate) • Terraform • AWS CloudFormation • Kubernetes • Jenkins • GitHub Actions • GitLab CI • Docker • Linux (Bash) • CI/CD • Git/GitHub • Python (Boto3) • SQL (MSSQL, PostgreSQL) • C# • ASP.NET Core • Entity Framework Core • RESTful API • JWT • Postman • JavaScript

Soft Skills – Collaboration, Solutions-oriented, Ability to Lead, Communication, Eagerness to Learn, Time Efficient, and Organization.

TECHNICAL /WORK EXPERIENCE

Cloud/DevOps Engineer, Cloud Chariots *(Hybrid – Lagos, Nigeria)* *May 2026 – Aug 2026*

- Designed, built, and maintained CI/CD pipelines using Jenkins, GitHub Actions, and GitLab CI to automate build, test, and deployment workflows, reducing manual release effort and improving deployment consistency.
- Provisioned and managed AWS infrastructure using Terraform and AWS CloudFormation, ensuring repeatable, version-controlled environment setups and faster recovery from failures.
- Containerized application workloads and deployed them on Amazon ECS, EKS, and Fargate, architecting a high-availability strategy to eliminate single points of failure and maintain uptime for internal users.
- Implemented monitoring and observability using CloudWatch, enabling proactive detection and rapid troubleshooting of production incidents, improving platform reliability and MTTR (mean time to resolution).
- Partnered with cross-functional engineering teams to embed cloud-native and DevOps best practices (automation, IaC, observability) into the software delivery lifecycle.

C# .NET Developer, Intern – *KGE Technologies* *(Remote – Chennai, India)* *July 2025 – Dec 2025*

- Engineered scalable RESTful APIs using ASP.NET Core, optimizing backend performance and data retrieval efficiency.
- Implemented secure authentication architectures using JWT, enforcing authorized access control and protecting user data.
- Optimized database interactions using Entity Framework Core, reducing query latency and improving application responsiveness.
- Streamlined Agile development workflows using Git for version control, ensuring code integrity for production releases.

IT Support Specialist, Intern – *Federal Airports Authority of Nigeria (FAAN)* *(Onsite – Lagos, Nigeria)* *Sept 2023 – Feb 2024*

- Maintained critical hardware and network infrastructure, ensuring minimal downtime for airport operations.
- Resolved technical incidents and configuration issues, optimizing system performance and user productivity.
- Executed routine maintenance and network troubleshooting, ensuring a stable and secure IT environment.

PROJECTS

Kestrel Loan Platform | Terraform, ECS Fargate, RDS, SQS, Lambda, AWS WAF, GitHub Actions *Oct 2026*

- Engineered a production-style loan application platform for a fictional microfinance bank entirely in Terraform, using 9 reusable modules so dev and prod differ only by settings.
- Secured the platform with private subnets and VPC endpoints instead of a NAT gateway, AWS WAF rate limiting, customer managed KMS keys and field-level encryption of customer BVNs.
- Built a GitHub Actions pipeline with OIDC (no long-lived access keys), Checkov scans, Terraform plans on pull requests and a manual prod approval gate, and proved automatic rollback by deploying a deliberately broken image.
- Load tested prod with k6 at 25 times normal traffic (19,602 requests, 0 failed, p95 latency 58 ms) and restored the database in a drill within 21 minutes against a 2-hour target, at a total AWS cost of USD 9.20. link

Enterprise Staff Portal Architecture (Cloud Chariots) | AWS Lambda, DynamoDB, Amazon SES, EventBridge, API Gateway
July 2026

- Engineered a decoupled serverless web application using AWS Lambda and API Gateway, designed for a cost-efficient, pay-per-use architecture.
- Built a real-time notification system and session storage using DynamoDB to automate leave and payroll-advance approval workflows.
- Set up automated transactional emails via Amazon SES, triggered by EventBridge schedules, for workflow status notifications.
- Enforced role-based access control (RBAC) and input validation gates to secure admin operational workflows and restrict unauthorized data submissions. link

Cloud Contact Center (Client: ThinkFinance MFB) | Amazon Connect, Web Chat, Amazon Polly, JavaScript *June 2026*

- Engineered a scalable omnichannel contact center for ThinkFinance MFB, establishing real-time Voice and Web Chat routing channels for support agents.
- Designed inbound routing flows with Africa/Lagos business-hours logic and automated Amazon Polly greetings for accurate off-hours call handling.
- Created and styled a secure communication widget utilizing domain whitelisting to restrict unauthorized origin requests, enabling smooth client-side JavaScript integration on the bank's website.
- Configured agent queues and routing profiles in the Contact Control Panel (CCP) to connect customers directly with available agents. link

Serverless AI Recruiter Assistant | Amazon Lex, AWS Lambda, Python, IAM *Feb 2026*

- Built an event-driven chatbot using Amazon Lex and AWS Lambda, supporting cost-efficient, always-on availability for recruiters.
- Developed a Python Lambda handler to return predefined responses to recruiter questions based on recognized intents.
- Enforced least-privilege security via IAM and utilized CloudWatch for real-time debugging and monitoring.
- Configured the Amazon Lex NLU confidence threshold to 0.70 and implemented fallback responses. link

Enterprise Multi-Tier Web Application Deployment | Amazon VPC, EC2, RDS, ALB, ASG, Secrets Manager *Jan 2026*

- Deployed a fault-tolerant 3-tier architecture across multiple Availability Zones using a custom VPC, designed for high availability.
- Configured Application Load Balancers and Auto Scaling Groups to handle peak traffic loads with zero manual intervention.
- Secured backend tiers in private subnets and integrated AWS Secrets Manager to remove hardcoded credentials.
- Utilized EC2 User Data scripts to automate LAMP-stack deployment and documented the setup process. link

Serverless Cloud Infrastructure (My Portfolio Website) | AWS S3, CloudFront, Route 53, ACM *Dec 2025*

- Designed and deployed my personal professional portfolio website on S3 with global caching via CloudFront to improve page load performance.
- Hosted static assets with fine-grained bucket policies and ACM SSL/TLS certificates for HTTPS encryption.
- Configured custom DNS routing using Route 53, leveraging AWS infrastructure for reliable DNS resolution. link

EDUCATION

Kwara State University (KWASU), Malete, Kwara State, Nigeria. *September 2024*
Bachelor of Science in Computer Science
CGPA: 3.85/4.00 [First Class (Honors)]
